## SUMMARY

Enthusiastic B.Tech student skilled in C++, DSA, and full-stack web development. Experienced in building projects involving machine learning, and authentication systems. Passionate about problem-solving and developing scalable software solutions.

## PROJECTS

TRUCKIDO. 01/2026 - Present

### Solo Founder | App Development

- Built the concept of an on-demand truck booking app that connects users with nearby truck drivers for transportation services.
- Designed the complete workflow including location-based search, booking system, and real-time tracking of orders.
- Planned backend architecture with user authentication, data management, and API integration for smooth communication.
- Tech Stack: Flutter (planned), Firebase (planned), REST APIs, UI/UX Design

StreAM (Stress Analyzer & Manager) 07/2025 - 11/2025

### Full Stack Development

- Developed a full-stack web application to analyze user stress levels and provide personalized daily wellness goals based on different stress categories.
- Designed system workflow to process user inputs, classify stress levels, and display category-specific recommendations interactively.
- Implemented a machine learning classification approach (e.g., Logistic Regression / Naive Bayes) for stress prediction based on input data
- Tech Stack: HTML, CSS, JavaScript, Python, Streamlit.

Placement Portal - GEHU 02/2026 - 06/2026

### Full Stack Development

- Developed a full-stack web application to streamline job postings, applications, and student placement activities.
- Designed workflow for user roles (students and recruiters), enabling job listing, application submission, and status tracking.
- Implemented backend logic for authentication, data management, and efficient handling of job and user records.
- Tech Stack: HTML, CSS, JavaScript, React.js, Node.js, Express.js, MongoDB.

Graphical Password Authentication System 09/2024 - 12/2024

### Security Project Development

- Developed a secure authentication system using graphical passwords to improve resistance against brute-force and shoulder-surfing attacks.
- Designed user workflow for image-based password selection and verification, balancing usability with security principles.
- Implemented authentication logic with secure storage and validation of user credentials using database integration.
- Tech Stack: Python, MongoDB, Authentication Logic, Security Concepts

## EDUCATION

Bachelor of Technology , CSE 08/2023 - Present

Graphic Era Hill University Dehradun, Uttarakhand

CGPA | 8.03 / 10.0

## SKILLS

> Core Logic & Development: C • C++ • Javascript • Python Developer • Full-Stack Developer

>CS Fundamentals: Operating Systems • DBMS •Computer Networks • Data Structures & algorithms • OOPS

>Professional Traits: Solo Project Builder • Problem Solver • Fast Learner

## KEY ACHIEVEMENTS

### ✍ AWS Cloud & Certifications:

Completed AWS Cloud Practitioner training via AWS Skill Builder, gaining knowledge of cloud fundamentals, IAM, and shared responsibility models.

### 📅 Hackathon Participation:

Participated in a multiple 24-hour hackathon, collaborating in a team to design and implement a solution under strict time constraints.

### 🔗 DBMS Certification:

Earned certification in Database Management Systems through NPTEL (IIT-backed), strengthening concepts like SQL, normalization, and database design.
